

Experiment-9

R-Code

```
diabetes<-data.frame(  
  Age=c(25,30,35,40,45,50,55,60,65,70),  
  BMI=c(22,24,26,28,30,31,33,34,35,36)  
)  
  
plot(diabetes$Age,diabetes$BMI,  
      xlab="Age",ylab="BMI")  
  
group<-cut(diabetes$Age,  
           breaks=c(20,30,40,50,60,80))  
  
barplot(tapply(diabetes$BMI,group,mean))
```

Output

```
> diabetes<-data.frame(  
+   Age=c(25,30,35,40,45,50,55,60,65,70),  
+   BMI=c(22,24,26,28,30,31,33,34,35,36)  
+ )  
>  
> plot(diabetes$Age,diabetes$BMI,  
+       xlab="Age",ylab="BMI")  
>  
> group<-cut(diabetes$Age,  
+            breaks=c(20,30,40,50,60,80))  
>  
> barplot(tapply(diabetes$BMI,group,mean))  
> |
```
